Footnote:

*) Stereoisomers results on request. **) LOQ = not detectable. The measured value was below the limit of detection of 0.01 % (w/w) or 100 mg/kg.
The expected measurement uncertainty varies with substance and concentration and can be assumed to be a maximum of 10 %.
For the calculations of the equivalent sums, the respective acid forms were multiplied by the factor 0.877 or 0.878 to conclude the equivalent amount of the neutral form. Analytical methods: HPLC-DAD, GC-FID and GC mass spectrometry (European Pharmacopoeia: 2.2.28, 2.2.29 and 2.2.43).
This Certificate of Analysis may only be reproduced as a whole and not in parts. Any alteration is punishable under Section 225 of the Dutch Criminal Code (forgery)
